AI_DEVELOPMENT_RULES.md

LX SHOT Website Development Constitution

Version 1.0

This document defines the mandatory engineering, design, branding, UX, animation, performance, and quality standards for the LX SHOT website.

Every AI agent contributing to this repository must follow these rules without exception.

1. PROJECT MISSION

You are not building a typical ecommerce website.

You are building the official flagship website for **LX SHOT**, an ultra-premium specialty coffee brand centered on high-altitude Arabica, intentional energy, quiet luxury, and refined craftsmanship. All design and implementation decisions must reinforce these brand values as described in the Brand Story and Brand Tone Guide.

2. NEVER CHANGE THE BRAND

The AI must never:

- redesign the logo
- recolor the logo
- stretch the logo
- replace the logo
- invent another brand identity
- use placeholder logos
- substitute generic coffee branding

Every branded surface must display the authentic LX SHOT identity.

3. PREMIUM DESIGN ONLY

Everything must feel luxury.

Not trendy.

Not playful.

Not colorful.

Not cheap.

Every page should feel like entering a premium boutique.

4. NEVER USE CHEAP DESIGN PATTERNS

Never use:

- ✗ bright red buttons
 - ✗ neon colors
 - ✗ rounded cartoon buttons
 - ✗ oversized emojis
 - ✗ excessive gradients
 - ✗ random icons
 - ✗ clutter
 - ✗ generic ecommerce templates
 - ✗ cheap shadows
 - ✗ stock-style layouts
-

5. UX PRINCIPLES

Every interaction must feel intentional.

Every animation must have purpose.

Every page must breathe.

Whitespace is part of the design.

Luxury comes from restraint.

6. ANIMATION PRINCIPLES

Animations should never distract.

Animations should guide attention.

Use:

Smooth Fade

Luxury Scale

Soft Blur

Opacity

Parallax

Micro Interaction

Hover Elevation

Luxury Glow

Cursor Magnetism

Page Reveal

Loading Motion

Never use:

Bounce

Flash

Shake

Random Rotations

Fast Zooms

Exaggerated Effects

7. CODE QUALITY

Every component must be:

Reusable

Modular

Typed

Documented

Accessible

Scalable

Maintainable

Readable

Avoid duplicated code.

Use component composition.

Follow best React practices.

8. PERFORMANCE RULES

Performance is mandatory.

Target:

95–100 Google Lighthouse Performance

95+ Accessibility

95+ SEO

95+ Best Practices

Optimize:

Images

Fonts

Animations

JavaScript

Lazy loading

Code splitting

Prefetching

9. MOBILE FIRST

The website must be exceptional on:

Desktop

Laptop

Tablet

Mobile

Large Mobile

Small Mobile

No horizontal scrolling.

No broken layouts.

No overlapping content.

10. PRODUCT PHOTOGRAPHY

Every product image must appear professionally photographed.

Requirements:

Studio lighting

Premium shadows

Matte black packaging

Gold foil reflections

Luxury coffee beans

Natural steam

Warm mood

High contrast

Ultra HD

No low-resolution images.

No obvious stock photos.

11. PACKAGING

Every package should look retail-ready.

Every product should display:

Front

Back

Side

Perspective

Lifestyle

Close-up

Packaging materials should appear premium:

Soft-touch matte finish

Gold foil

Embossing

Minimal typography

Luxury labels

12. ECOMMERCE EXPERIENCE

Shopping should feel effortless.

Every page should encourage confidence.

The checkout should require as few steps as practical.

Support:

Guest Checkout

Customer Accounts

Saved Addresses

Gift Cards

Subscriptions

Rewards

Coupons

Wishlist

Recently Viewed

Related Products

Order Tracking

13. ACCESSIBILITY

Follow WCAG AA guidelines.

Ensure:

Keyboard navigation

Screen reader support

Focus states

Color contrast

Alt text

Semantic HTML

Accessible forms

14. SEO

Every page must include:

Meta Title

Meta Description

Open Graph

Twitter Cards

Structured Data

Canonical URLs

Optimized headings

Readable URLs

XML sitemap

Robots configuration

15. RESPONSIVE IMAGES

All images must:

Use next/image

Be optimized

Be lazy-loaded

Use modern formats

Scale properly

Maintain quality

16. AI IMAGE POLICY

If placeholder assets are required:

Generate luxury coffee imagery.

Never use low-quality placeholders.

Never use cartoon illustrations.

Every generated image must resemble a premium commercial campaign.

17. COMPONENT LIBRARY

Create reusable components.

Examples:

Button

Card

Product Card

Collection Card

Navigation

Footer

Modal

Drawer

Toast

Badge

Accordion

Carousel

Product Gallery

Review Card

Newsletter

Each component must be reusable.

18. TYPOGRAPHY

Typography should express luxury.

Large headings.

Generous spacing.

Elegant hierarchy.

Comfortable reading width.

No compressed layouts.

19. WHITESPACE

Whitespace is mandatory.

Never fill every area.

Luxury brands use negative space.

20. NEVER SHIP PLACEHOLDER CONTENT

Never leave:

Lorem Ipsum

Placeholder images

Fake reviews

Broken links

Sample products

Dummy logos

Everything must be production ready.

21. GITHUB WORKFLOW

Before making major changes:

1. Read all specification documents.
 2. Summarize the requested work.
 3. Identify dependencies.
 4. Build in small, reviewable commits.
 5. Keep commits focused and descriptive.
 6. Wait for approval before major structural refactors.
-

22. QUALITY CHECK BEFORE EVERY COMMIT

Before completing any task, verify:

- No console errors.
 - No TypeScript errors.
 - No broken links.
 - No layout overflow.
 - No accessibility regressions.
 - Responsive behavior verified.
 - Performance impact considered.
-

23. WHAT SUCCESS LOOKS LIKE

When a visitor lands on **lxshot.com**, they should immediately feel:

- This is a world-class specialty coffee brand.
 - The products appear crafted with exceptional care.
 - The experience is calm, luxurious, and trustworthy.
 - Purchasing feels simple and secure.
 - The website reflects the values of purity, precision, origin, and intentional energy established by LX SHOT.
-

Additional Recommendation

I would also add one small file to your repository that is **never edited by the AI**:

PROJECT_MEMORY.md

This file serves as the project's permanent memory and contains:

- Final brand decisions.
- Approved color codes.
- Approved typography.
- Logo usage rules.

- Completed features.
- Future roadmap.
- Features explicitly rejected.
- Naming conventions.
- File and folder standards.
- Deployment details.
- Domain information.
- Contact information.
- Third-party integrations.

Every time you approve a major design or development decision, add it to PROJECT_MEMORY.md. Before starting any new task, instruct the GitHub AI agent to read both PROJECT_MEMORY.md and the six specification documents. This helps maintain consistency over long development sessions and prevents the AI from undoing earlier approved work.

With these six core documents plus PROJECT_MEMORY.md, you'll have a documentation package that closely resembles what a professional design agency would hand over to an engineering team before building a premium ecommerce website.
